

ZeroPM

Announcing the third international ZeroPM workshop on

Achieving Zero Pollution of Persistent and Mobile Substances

Removal through Technical Solutions

The European research project ZeroPM: Zero Pollution of Persistent, Mobile substances, is pleased to announce the third international workshop to be held on the

7th and 8th of October 2025
in Mytilene, Lesvos, Greece

The EU Green Deal and the accompanying Chemicals Strategy for Sustainability Towards a Toxic-Free Environment present bold action points that reflect the challenge associated with persistent and mobile substances. In October 2021, ZeroPM started its work towards enabling the ambitions of this Strategy to become an on-the-ground reality.

ZeroPM interlinks **Prevention**, **Prioritization** and **Removal** strategies to protect the environment and human health from persistent and mobile substances. The workshop will focus on recent innovations towards developing effective and sustainable technical solutions for removing persistent and mobile substances from water and sludge.

Presentations and panel discussions will be held by leading experts in these fields from diverse sectors, along with ZeroPM consortium members. The workshop will include an excursion to the ZeroPM pilot-scale sewage sludge treatment system that combines sludge pre-treatment (thermal or ultrasound), modified anaerobic digestion, hydrothermal carbonization and solar drying.

We invite water utilities, industry representatives, solution providers, researchers, NGOs, communications professionals and regulators to join ZeroPM in its mission towards a toxic free environment.

Registration will open in May. Spaces are limited. A moderate registration fee of approximately €130 will apply to cover refreshments, two lunches and evening program. If you are interested in a small booth for your company, please contact Sarah Hale.

Organized by ZeroPM, The University of the Aegean, The German Water Centre (DVGW-TZW) and The Norwegian Geotechnical Institute (NGI).
